

# KALCAST NiHard4

## Material data sheet

### Product features

Lining material for protection against abrasive wear. KALCAST NiHard4 is a hard casting with a high chromium and nickel content that is available in form of plates, individual shapes and cylinders.

### Quality features

KALCAST NiHard4 is made with the aim of achieving high resistance against abrasive wear combined with satisfactory resistance against impact wear.

### Product properties

Feature	Unit	Data
Chemical composition	Wt.-% C	3
	Wt.-% Cr	9
	Wt.-% Ni	5.5
	Wt.-% Fe and others	Balance
Hardness	HV <sub>10</sub>	600
Density	g/cm <sup>3</sup>	7.7
Thermal coefficient of expansion	K <sup>-1</sup> (20 – 350 °C)	14 - 15 x 10 <sup>-6</sup>
Thermal conductivity	W/mK (20 – 350 °C)	13
Max. application temperature	°C	350
Max. thermal shock resistance	°C/h	70

Due to the manufacturing process, it is not possible to exclude small variations in the properties of the product. This affects tolerances in the size, outer appearance and surface finish. Included are some typical features of hard cast materials, such as cavities and pores, all of which can be present within the range of specified tolerances.

Approximate figures are given for all technical data. They are based on assessment of tests on specific samples and cannot be considered as a guarantee for which Kalenborn would have to assume legal responsibility.

Subject to technical changes and errors.

# KALCAST NiHard4

## Material data sheet

### Product description

High-alloyed, abrasion resistant cast iron with high carbon content. The material is alloyed with chromium and nickel. The various shapes and geometries are cast in individual moulds.

### Installation

Standard attachment modes are used for KALCAST NiHard4. Cast KALCAST NiHard4 shapes can also be attached by synthetic resin based adhesives or by mineral glues as well as by temperature and acid resistant compounds.

### Advantages

High resistance against abrasive wear combined with good resistance against impact wear. Well suited for series-produced items. Wear protection for complex geometries. Very good wear protection reserve.

### Application examples

Typical applications of KALCAST NiHard4 are – e. g.

- pulverized coal pipes and bends
- concrete mixers
- crushers
- shot blasting machines
- hammers
- deflecting walls
- pump housings
- impact bars
- grinding rollers/grinding tables
